

Minerals & Gems from the American Museum of Natural History

Internationally acclaimed wine expert Jens Priewe has written the book for the contemporary wine consumer who drinks what he or she likes - one day a grand, awe-inspiring vintage; the next, an unknown wine from a country whose name has only recently appeared on the wine maps of the world. Priewe explains why some wines cost hundreds of dollars while others cost only ten. He provides a key to the complex language of wine and illuminates the science of wine making while honoring the art that creates great wines. About half of the book is devoted to the wine-making process itself, including everything from why wine grows best in poor soil to why a wine matures faster in a small barrel than in a large one. The other half examines the best wines of the world, country by country, and guides the reader to an understanding of the intricacies of wine tasting and appreciation. New topics covered in this edition include: How Much Wine Goes in Each Glass; Drinking Temperature; and Wine as an Investment. Illustrated with more than 1,000 color images, including computer graphics that explain the invisible processes of wine making; satellite maps and aerial photos of the world's most important wine regions; and photographs of individual vineyards by the world's best wine photographers; and fully updated throughout, Wine will quench the thirst for knowledge that true wine lovers feel rising within them whenever they uncork a bottle of fine wine.
